Projects

Artificial Intelligence Bot

During my masters, I worked on the machine learning project focused on enhancing the user experience, an AI chat bot was developed to make the navigation and information retrieval process easy for the user, NLP techniques (Tokenization, Bag of Words and Stemming) were used and feed forward neural network was build for training and processing the information in the chat bot. Python language was used with flask framework to develop the AI bot.

Registration Form

Registration form was developed. The data is been stored in google spread sheet. Python language is used for storing the user data to google sheets. Google APIs are used to connect the form with google spreadsheets.
